

**SURVEY OF PERSONAL
MAGNETIC FIELD EXPOSURE
Phase II : 1000-Person Survey**

EMF RAPID PROGRAM
ENGINEERING PROJECT #6

Prepared by
ENERTECH CONSULTANTS
17 Main Street
P.O.Box 770
Lee, Massachusetts 01238

Principal Investigators
Luciano E. Zaffanella - Enertech Consultants, Inc.
Graham W. Kalton - Westat, Inc.

Prepared for
Lockheed Martin Energy Systems, Inc.

241 W. Tyrone Road, D104
Oak Ridge, Tennessee 37831-6501

May 1998

ACKNOWLEDGEMENTS

Many persons contributed to this research project. Overall credit for the success of this project is given to the guidance of Dr. Paul Gailey of Lockheed Martin Energy Systems.

The staff of Westat designed the statistical sample, selected and recruited participants via telephone, and weighted the data. The active participation and contributions of Dr. Robert Clickner, Mary Dingwall, Dr. Louis Rizzo, Karen DellaTorre, Michelle Kiser Scheele, Sheila Krawchuk and Joyce Powell is acknowledged.

Richard Iriye of Enertech Consultants deserves the highest praise for the formidable task of managing the flow of the exposure meters to the participants, data analysis, and database development. The dedicated efforts of Teresa Diaz, and Amy Corrigan are acknowledged. We also acknowledge the contributions of Thomas Sullivan for personal exposure measurements protocol development, of Jeffrey Daigle for the development of the software to analyze the data collected by the personal exposure meters and for preparation of the database in the DOE RAPID format, and of Jane Fillmore for assistance in the preparation of the final report.

CONTENTS

| | |
|---|------------|
| ACKNOWLEDGMENTS | II |
| CONTENTS | III |
| SUMMARY | S-1 |
| 1 INTRODUCTION | 1-1 |
| 1.1 EMF Rapid Engineering Projects | 1-1 |
| 1.2 RAPID Engineering Project #6: Survey of Personal Magnetic Field Exposure | 1-2 |
| 1.3 Recommendations for Phase II | 1-3 |
| 2 SURVEY PROTOCOL | 2-1 |
| 2.1 Protocol Steps | 2-1 |
| 2.2 Personal Exposure Meter | 2-4 |
| 3 DATA MANAGEMENT AND ANALYSIS | 3-1 |
| 3.1 Recruitment of Participants | 3-1 |
| 3.2 Consent Form..... | 3-3 |
| 3.3 Meter Delivery and Return..... | 3-4 |
| 3.4 Participation Rate | 3-5 |
| 3.5 Analysis of Meter, Diary, and Questionnaire Data..... | 3-6 |
| 3.6 Database Description | 3-10 |
| 3.6.1 Introduction | 3-10 |
| 3.6.2 Metadata | 3-10 |
| 3.6.3 Data Products | 3-10 |
| 3.6.4 Other Data | 3-11 |

| | |
|---|------------|
| 4 SURVEY RESULTS..... | 4-1 |
| 4.1 Period of Performance | 4-1 |
| 4.2 Sample Characteristics (Age, Gender, Region) | 4-2 |
| 4.3 Sample Characteristics (Activity Types, Occupation) | 4-3 |
| 4.4 Sample Characteristics (Residence and Power Line Characteristics)..... | 4-4 |
| 4.5 Results (Tables) | 4-5 |
| | |
| 5 ESTIMATES OF EXPOSURE PARAMETERS OF THE GENERAL POPULATION..... | 5-1 |
| 5.1 Sample Unit Weight..... | 5-1 |
| 5.2 Estimate of the Distribution of the 24-Hour Average Magnetic Field..... | 5-2 |
| 5.3 Calculation of Statistical Accuracy..... | 5-4 |
| 5.4 Variance of the Estimates of 24-Hour Average Distribution Parameters..... | 5-5 |
| 5.5 Estimates of Other Quantities Recorded During 24-Hour | 5-7 |
| 5.5.1 Time Above Given Field Values..... | 5-7 |
| 5.5.2 Number of Sudden Field Changes..... | 5-9 |
| 5.5.3 Length of Time with Constant Field..... | 5-11 |
| 5.5.4 Intermittence | 5-11 |
| 5.5.5 Correlation between Different Exposure Metrics..... | 5-13 |
| 5.6 Average Field During Different Types of Activities | 5-15 |
| 5.6.1 Period “In Bed” | 5-15 |
| 5.6.2 Period “At Home Not In Bed” | 5-16 |
| 5.6.3 Period “At Work” | 5-18 |
| 5.6.4 Period “In School” | 5-19 |
| 5.6.5 Period “During Travel” | 5-21 |
| 5.6.6 Comparison of Average Magnetic Field During Different Activities..... | 5-22 |
| 5.7 Other Quantities Recorded During Different Activity Periods..... | 5-24 |
| 5.7.1 Time Above Given Field Values..... | 5-24 |
| 5.7.2 Number of Sudden Field Changes..... | 5-31 |
| 5.7.3 Length of Time with Constant Field..... | 5-34 |
| 5.7.4 Intermittence | 5-35 |
| 5.7.5 Correlation Between Exposures During Different Activities | 5-37 |

| | |
|--|------------|
| 5.8 Effect of Parameters on the Average Magnetic Field during Personal Exposure Measurements..... | 5-39 |
| 5.8.1 Effect of Gender on 24-Hour Average Field..... | 5-39 |
| 5.8.2 Effect of Age on 24-Hour Average Field | 5-41 |
| 5.8.3 Effect of Region on 24-Hour Average Field | 5-42 |
| 5.8.4 Effect of Type of Occupation on Work Exposure | 5-44 |
| 5.8.5 Effect of Residence Characteristics (Residence Type, Floor Area, Bedroom Floor, Water Pipes) on Residential Exposure | 5-46 |
| 5.8.6 Effect of Proximity to Power Lines on Residential Exposure | 5-50 |
| 6 DISCUSSION AND CONCLUSIONS..... | 6-1 |
| 6.1 Estimates for the U.S. Population. Limitations and Strengths of the 1000-People Survey | 6-1 |
| 6.2 Estimating Yearly Average Magnetic Field for the U.S. Population | 6-3 |
| 6.3 Comparison with Other Data..... | 6-6 |
| 6.4 Conclusions | 6-8 |
| 7 REFERENCES..... | 7-1 |
| A LETTERS AND FORMS USED FOR THE MAGNETIC FIELD EXPOSURE MEASUREMENTS..... | A-1 |
| Appendix A Table of Contents..... | A-1 |
| B SURVEY RESULT TABLES | B-1 |
| C METADATA FILE LISTING..... | C-1 |
